

**Amendment to the Claims:**

Please amend the claims, including all prior versions, with the listing of claims below.

**Listing of Claims:**

1. (currently amended) A method for establishing a real-time communications connection between a first and a second subscriber of a telecommunications network, comprising:
  - creating an object intended for use on a computer at the second subscriber side of the telecommunications network;
  - inserting an address assigned to the second subscriber in the telecommunications network into the object;
  - transferring the object to the first subscriber;
  - storing the object on the computer of the first subscriber;
  - reading out, with aid of a function which is activated by the first subscriber, the address assigned to the second subscriber in the telecommunications network from the object; and
  - establishing the real-time communications connection between first and second subscriber with aid of the address, wherein the address assigned to the second subscriber in the telecommunications network is added as an attribute to the content of the object and is read out.
2. (currently amended) A method for establishing a real-time communications connection between a first and a second subscriber of a telecommunications network, comprising:
  - creating an object intended for use on a computer at the second subscriber side of the telecommunications network;
  - inserting an identification assigned to the second subscriber into the object;
  - transferring the object to the first subscriber;
  - storing the object on a computer of the first subscriber;
  - determining, with aid of a function which is activated by the first subscriber, the address assigned to the second subscriber in the telecommunications network using the identification included in the object; and
  - establishing the real-time communications connection between first and second subscriber with aid of the address, wherein the identification assigned to the second subscriber is added as an attribute to a content of the object and is read out.

3. (previously presented) The method in accordance with Claim 2, wherein  
the identification included in the attribute of the object is transferred in the  
telecommunications network using the function activated by the first subscriber,  
the address of the second subscriber is determined based on the identification, and  
the connection to the second subscriber is established.
4. (previously presented) The method in accordance with claim 1, wherein  
an e-mail is provided as the object,  
an e-mail address of the second subscriber is included as the identification, and  
the address of the second subscriber in the telecommunications network is determined  
based on the e-mail address.
5. (currently amended) A computer provided to store a program for execution of a method to  
establish a real-time communications connection between a first and a second subscriber of a  
telecommunications network, comprising:  
a ~~device to establishing~~ the real-time communications connection between the first and  
second subscribers based on an address assigned to the second subscriber,  
including a function for reading out from ~~the~~ an object of the computer the address  
assigned to the second subscriber, and  
the address assigned to the second subscriber is added as an attribute to a content of the  
object, wherein the object is created at the second subscriber side of the telecommunications  
network.
6. (currently amended) A computer provided to store a program for execution of a method to  
establish a real-time communications connection between a first and a second subscriber of a  
telecommunications network, comprising:  
a ~~device to establishing~~ the real-time communications connection between a first and a  
second subscriber based on an address assigned to the second subscriber,

including a function for reading out an identification assigned to the second subscriber from an object of the computer, and

including a function for transferring the address assigned to the second subscriber based on the identification, wherein

the address assigned to the second subscriber is added as an attribute to a content of the object, and

wherein the object is created at the second subscriber side of the telecommunications network.
